Heritage Construction - Project in Progress Testimonial

At Metal Craft, we needed a new building to accommodate our manufacturing capabilities. We selected Heritage Construction to facilitate the design build process and the construction of our new facility. Our new building incorporates many green building technologies and innovations to maximize energy efficiencies while using natural resources wisely. Heritage has been instrumental in providing suggestions and solutions to lessen our impact on our surroundings while creating an environment that is safe and improves productivity.

Throughout the building development process, which is about seventy five percent complete, Heritage has been very responsive to our needs. They are very timely and willing to work with any design changes to finish the building according to our specifications. They are in constant communication so we always know what to expect and what the next steps are in the process.

Heritage provides us with on-going recommendations for improvements to our facility as we complete parts of the project. They are realistic about the design and construction process regarding timelines, budgets and suggested solutions.

We are excited to complete our new facility and we are pleased with our selection to work with Heritage Construction.
